A.I. ALIKHANYAN NATIONAL SCIENCE  
LABORATORY (YERPHI) Foundation

- Are we alone in the Universe or there are other civilizations?
- How to contact them?
- What will bring to humanity the contact with them?

WAS LIFE SPREAD ALL  
OVER THE UNIVERSE?

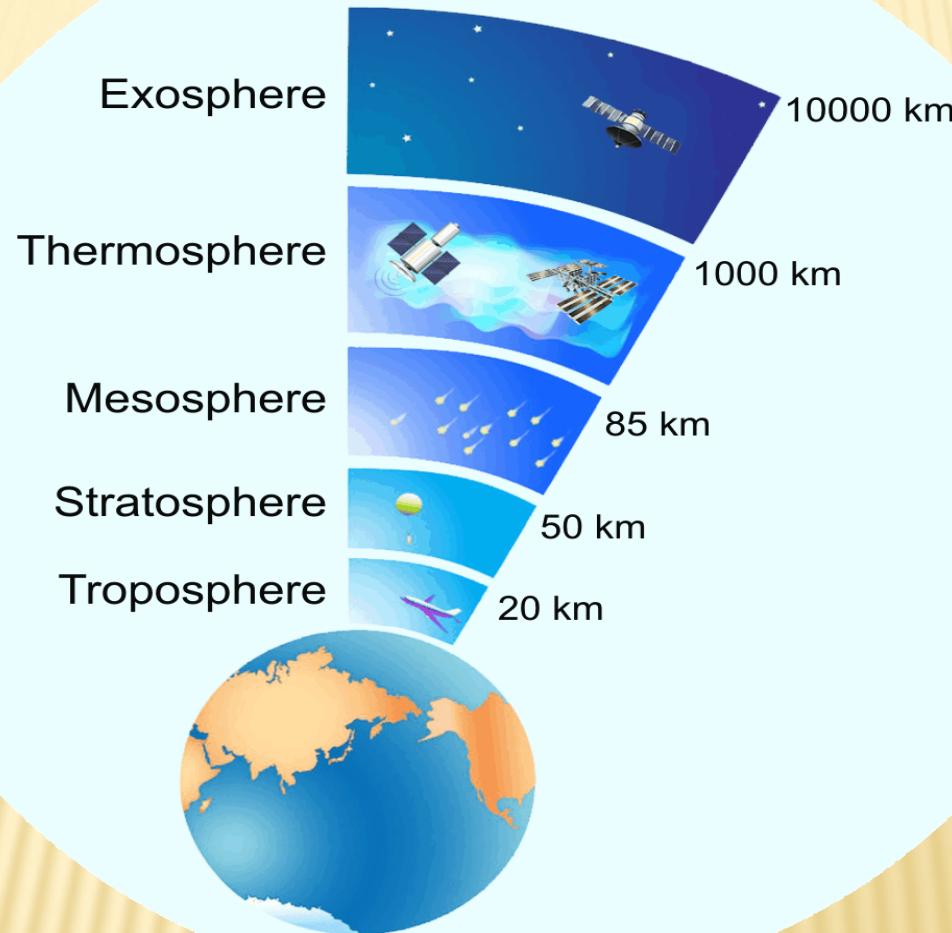

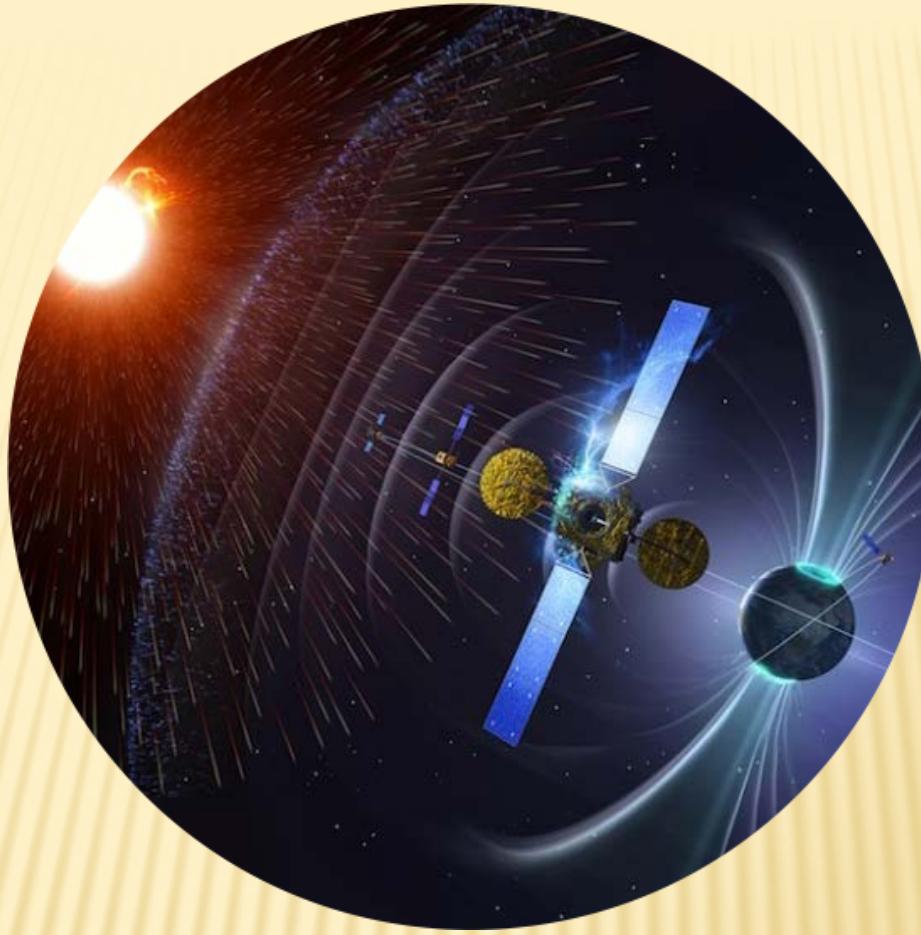

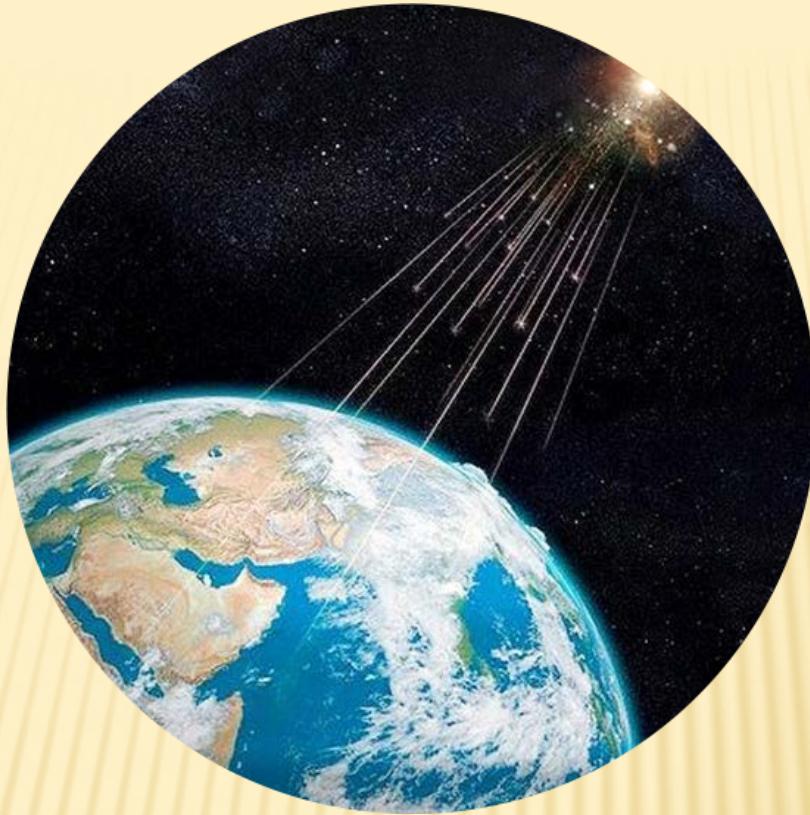

Comet Churyumov-Gerasimenko on the background of Los Angeles. Comet composition is of great interest: water ice, "space debris"; the density of this comet substance is  $0.4 \text{ g/cm}^3$ , with a total mass of  $10^{13} \text{ kg}$ .

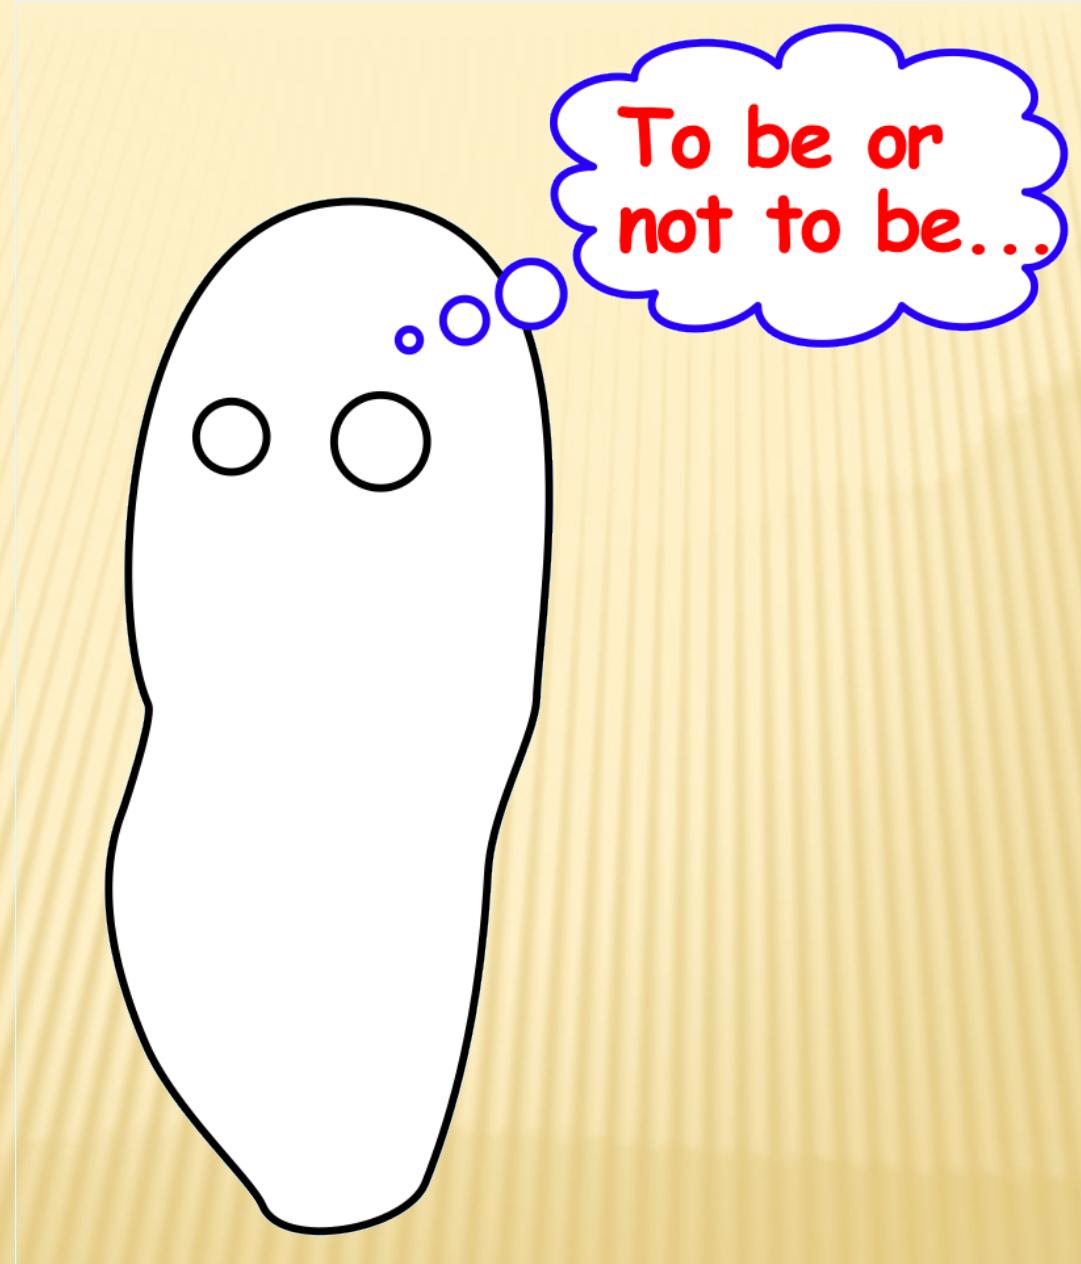

**Protection due to the Earth's atmosphere, the exosphere begins at about 1000 km**

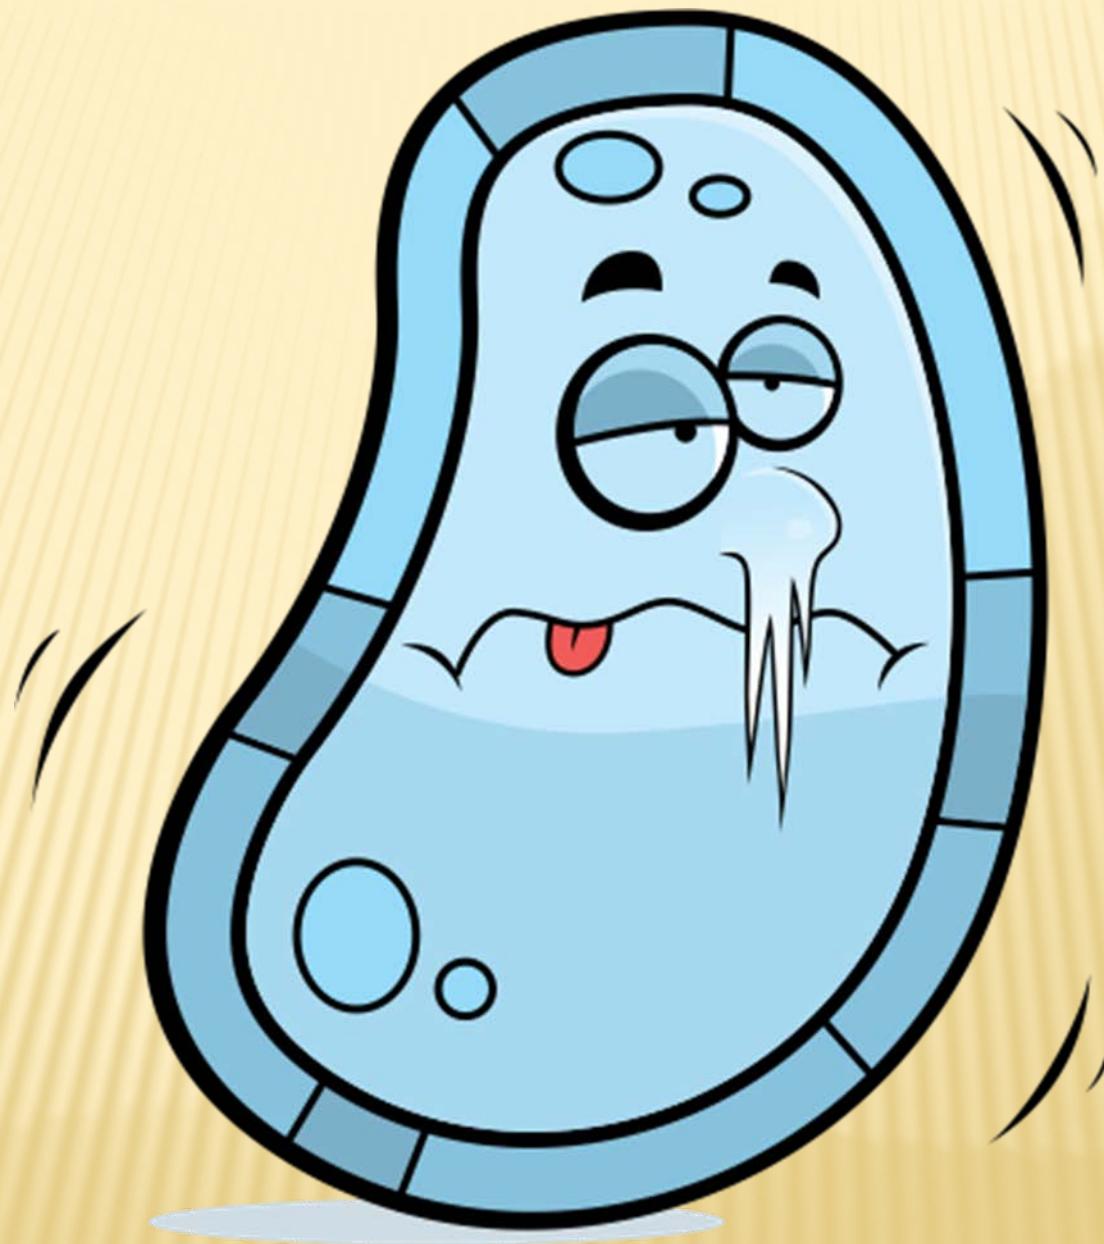

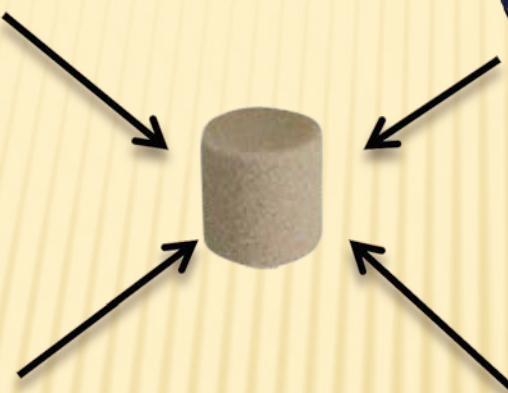

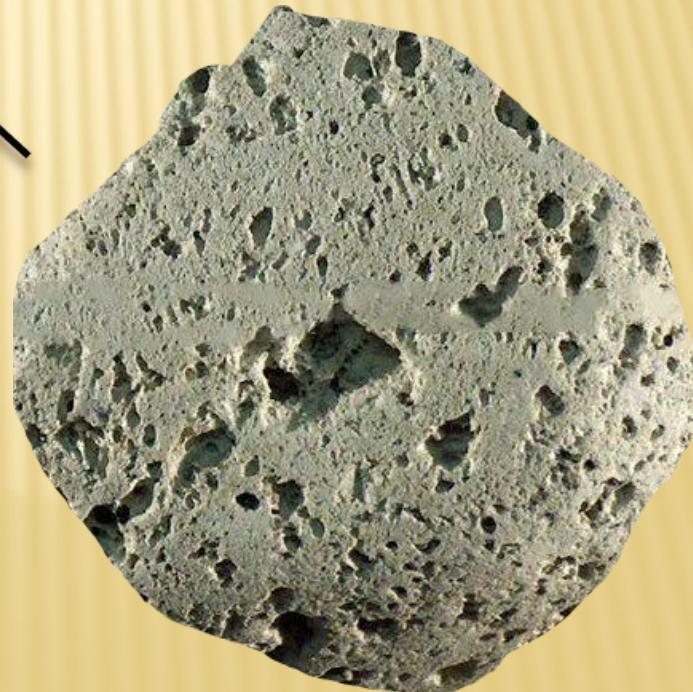

**Protection, thanks to the magnetic field of the Earth, which extends according to different data from 60 to 100 thousand km.**

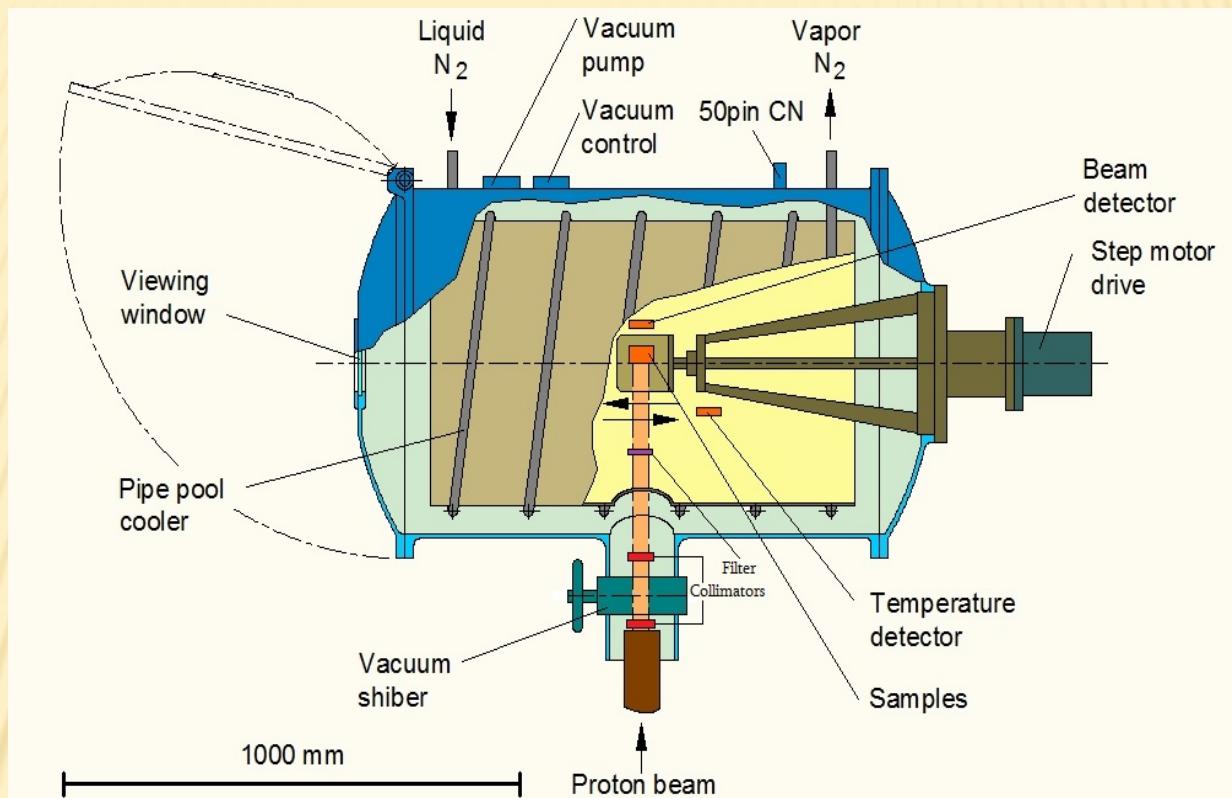

In the interplanetary space, electron and proton fluxes, uranium nuclei with an energy range from tens of eV to  $10^{18}$ - $10^{19}$  eV, and the linear energy transfer spectrum (LET), determining the nature of the local effect on cells and tissues of bioobjects, from tenths of keV/ $\mu$ m to  $2 \times 10^3$  keV/ $\mu$ m

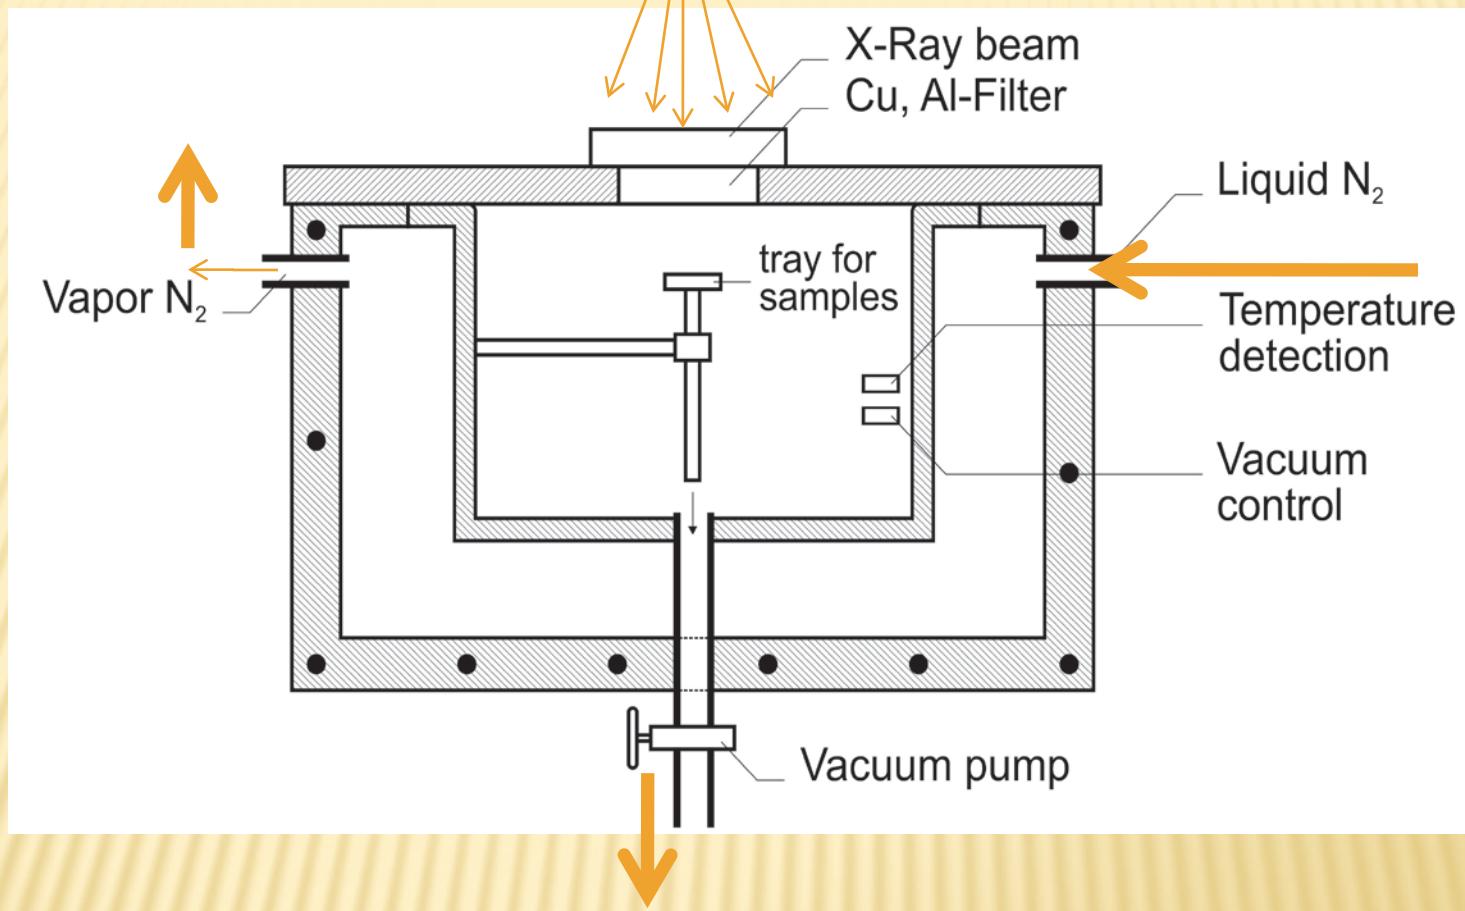

The measuring vacuum chamber and communications scheme, ensuring required parameters' formation (functioning model in Applied R&D Division of A. I. Alikhanyan National Science Laboratory (Yerevan Physics Institute) (ANL-YerPhi)).

The general view of the radiating head (gantry) of RUM-17

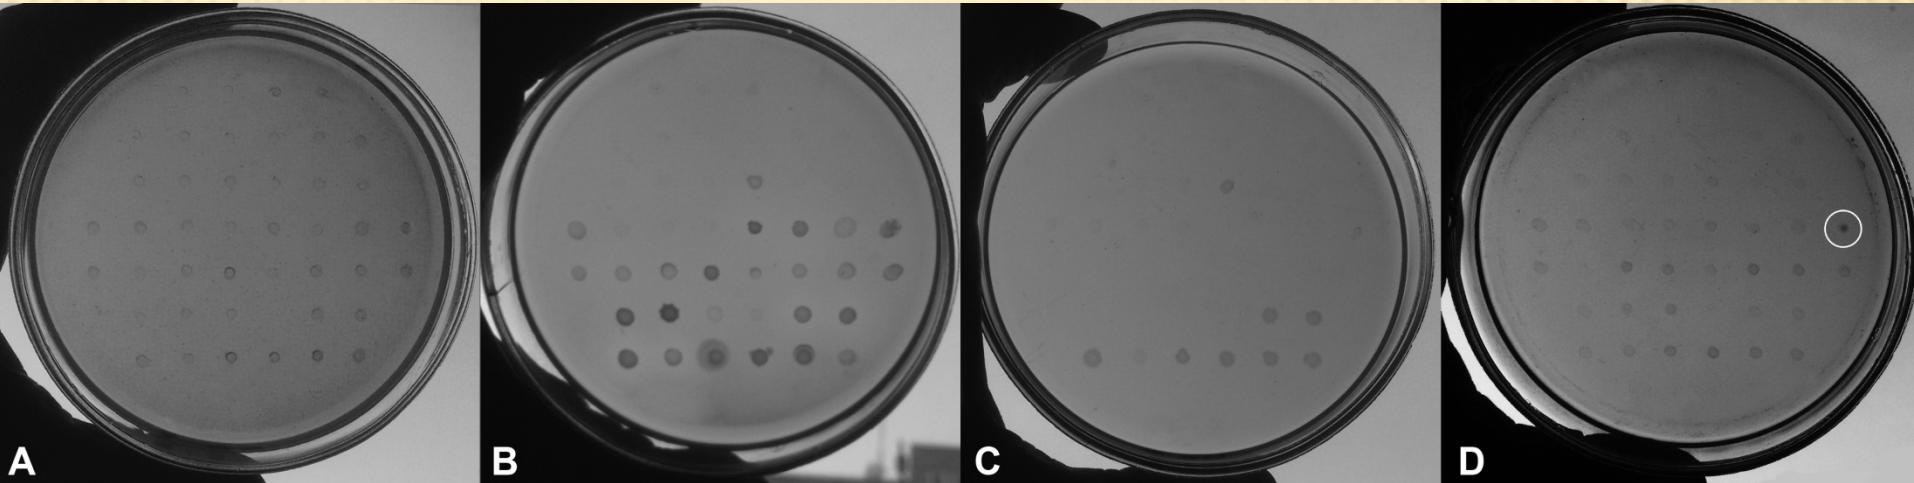

The scheme of top box for sample irradiation (camera-attachment to RUM-17).

# THE OBJECTS of INVESTIGATION

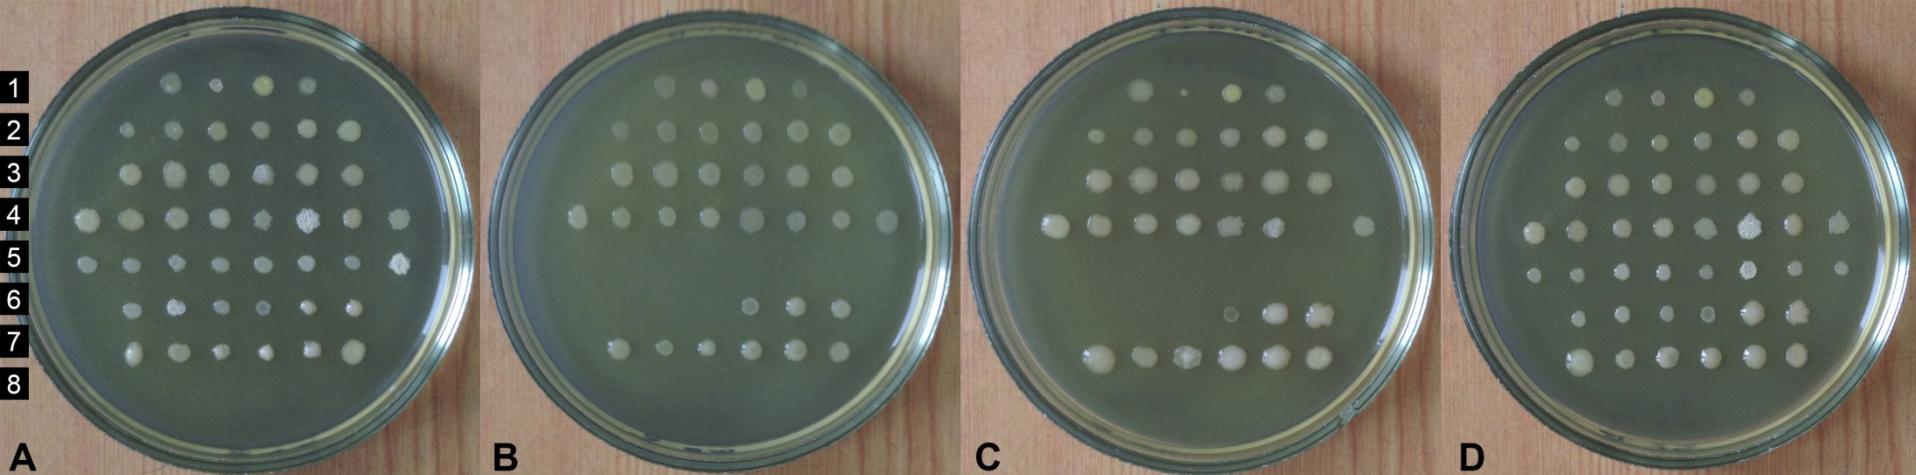

Data presented on ICEEMS (Guangzhou, China, 2015)

***Proceedings Advances in Energy, Environment and Materials Science – Wang & Zhao (Eds), 2016 Taylor & Francis Group, London, ISBN 978-1-138-02931-6***

**Figure 1.**  
Growth of the tested cultures of bacteria on the minimal media: A – MM, B – MM+A, C – MM+TL, D – MM+TC.

**Figure 2.**  
Growth of the tested cultures of microorganisms on nutrient environments: A – MPA, B – MPA with the actara, C – MPA with the thiamethoxam, purified from actara, D – MPA with the thiamethoxam of firm production. The arrangement of the strains is the same, as on Figure 1.

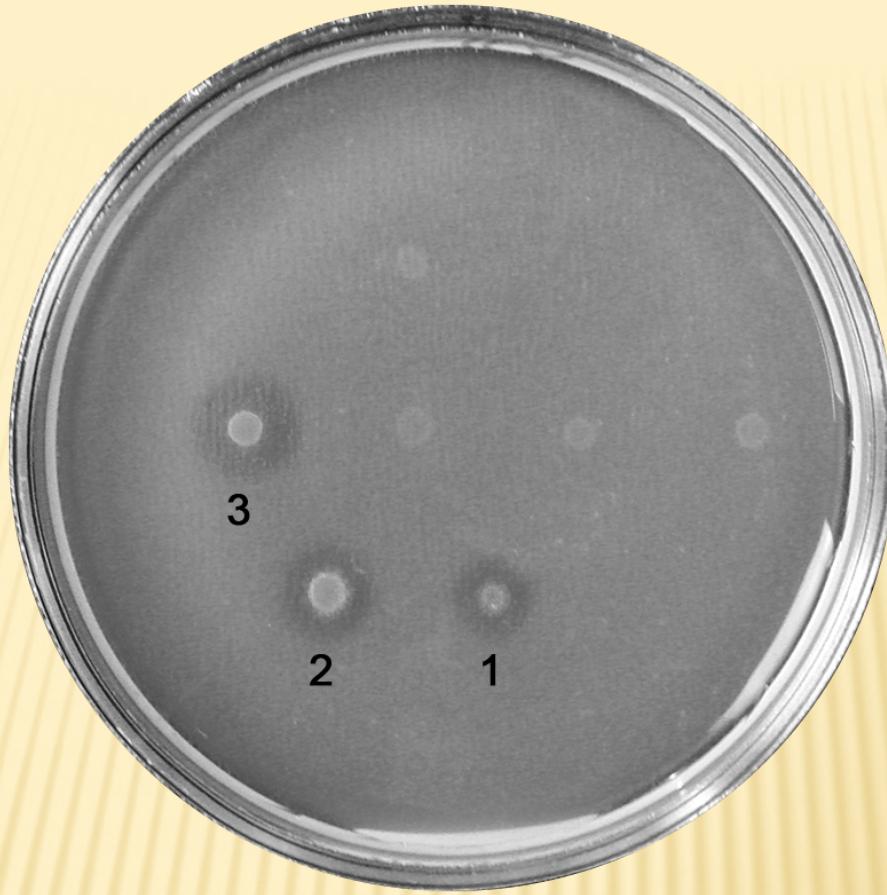

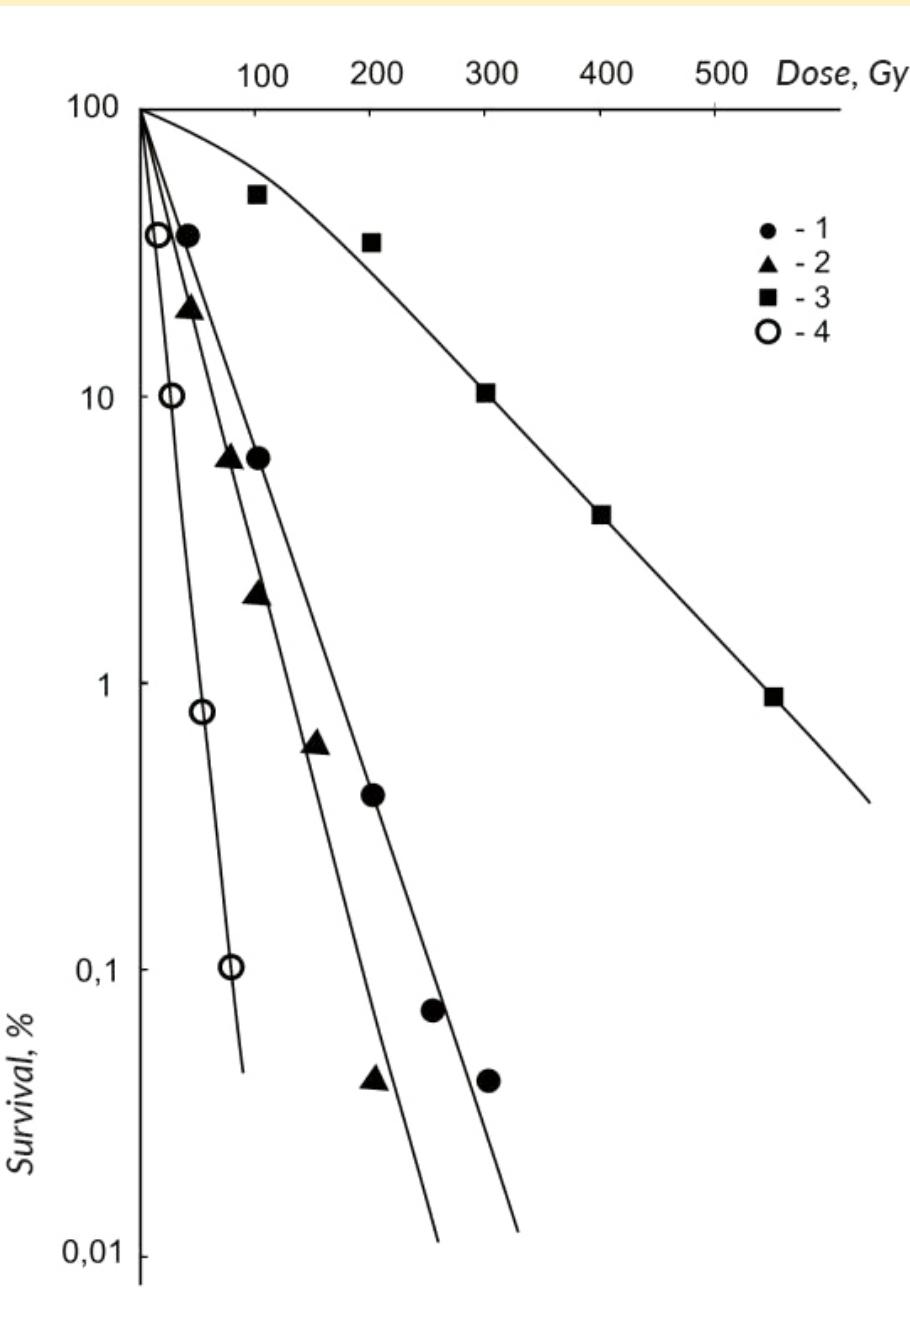

Figure 3.

Formation of halo on MC+A medium. Counter-clockwise from below: 1 – after the first passage; 2 – after two passages; 3 – after three; other plaques – the strains that not forming halo.

## The Examples of Expected results similar to earlier performed works, such as:

Avakyan Ts.M., Mkrtchyan N.I., Simonyan N.V., Khachatryan G.E. The Research of Biological Action of the Electrons with the Energy of 7.5 MeV on the Cells of E. Coli K-12 Bacteria Having Different Reparation Genotype, *The Report of NAS of Armenia*, v.111, No 2, pp. 164-170, 2011  
([http://elib.sci.am/2011\\_2/08\\_2\\_2011.pdf](http://elib.sci.am/2011_2/08_2_2011.pdf))

Survival curves of the cells of bacteria *E. coli* K-12 different strains irradiated with electrons of 7.5 MeV:  
Strain *AB-1157* - usual irradiation conditions (1),  
Strain *AB-1157* - 2 hours preliminary exposure in physiological saline (2),  
Radioresistant strain *BL-1114* (3),  
Radiosensitive strain *AB-2463* (4).

# The samples of dose responce curves for different kinds id bacteria

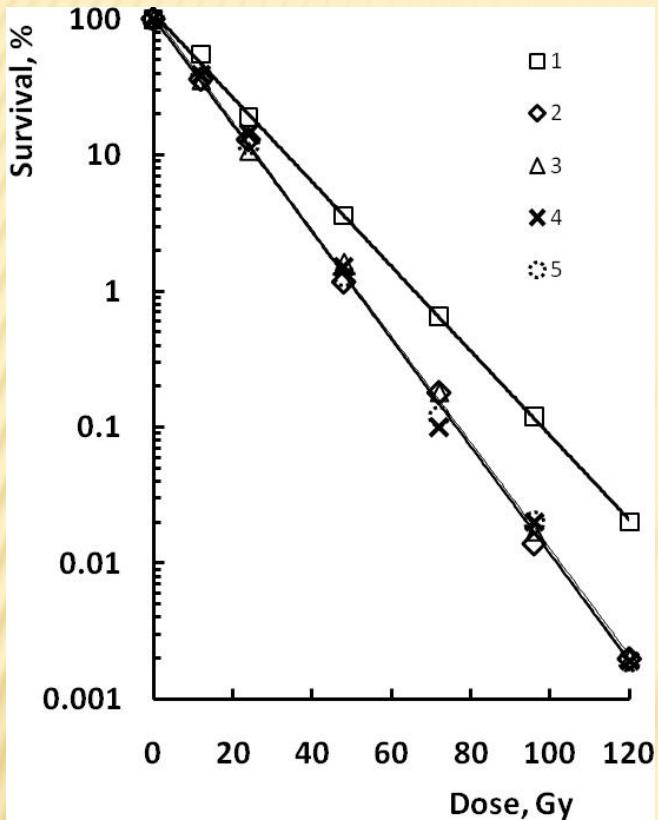

Fig.1.  
Dose-responce curves  
for radiosensitive cells of  
bacteria *P. fluorescens*

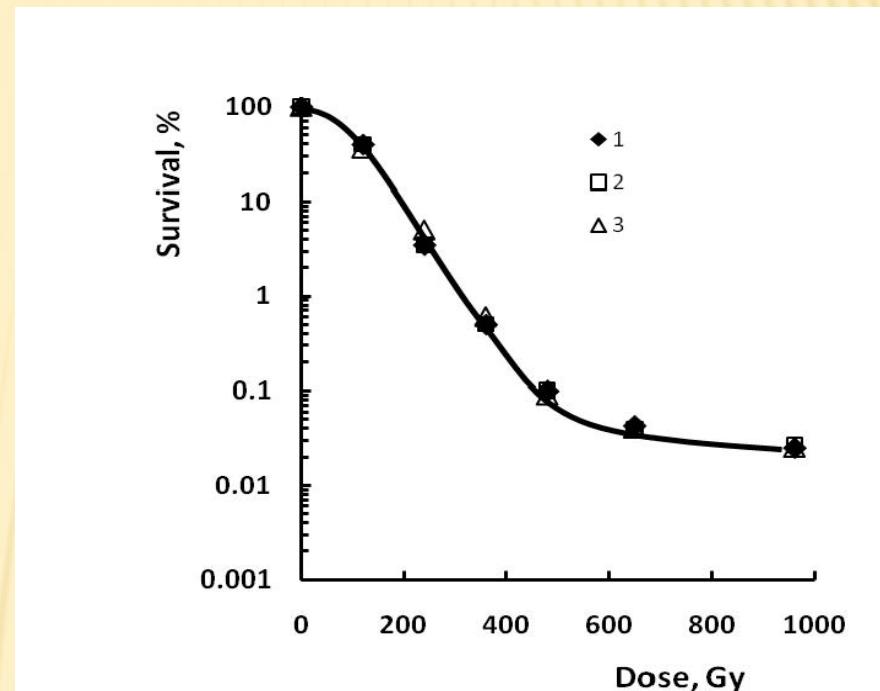

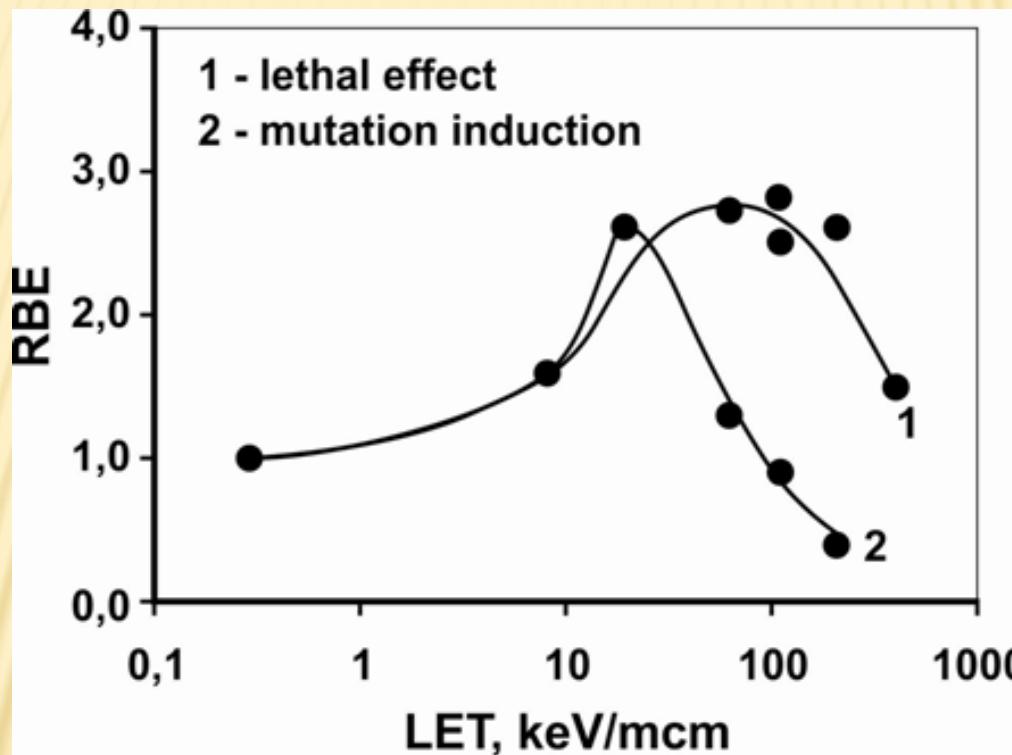

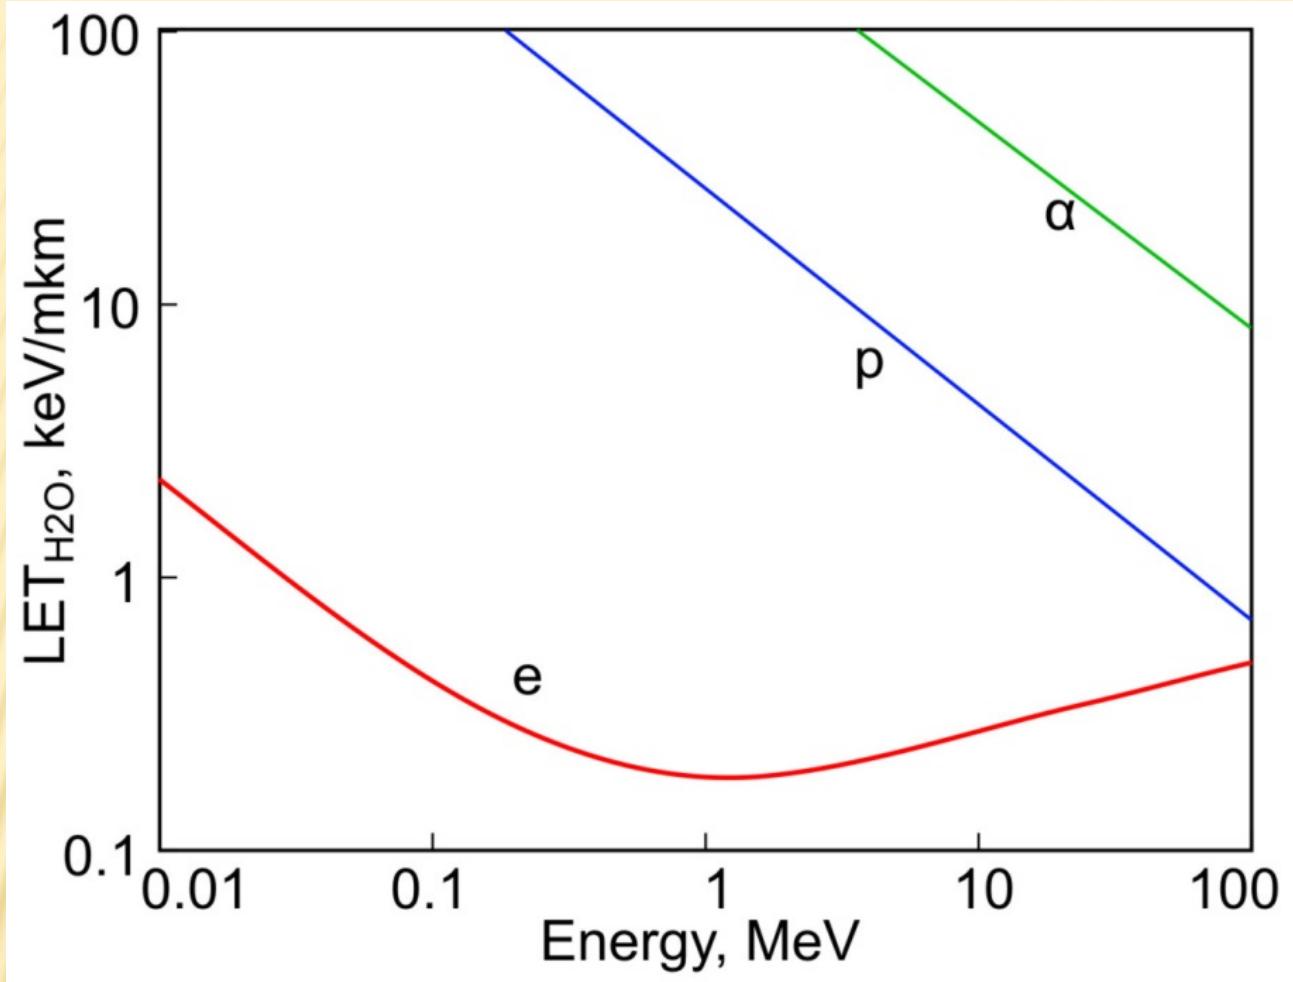

Fig.2.  
Dose-responce curves  
for radioresistance cells  
of bacteria *Bacillus  
subtilis*

## The possibility of obtaining mutants.

The graphs of the yield of mutants and the lethal effect on the beams of accelerated ions (Krasavin EA, Dubna).

Dependence of RBE on LET of particles based on the criterion of Lac<sup>-</sup> mutations induction and the lethal effect for bacteria *E. coli*.

**Dependence of LET from Energy for different particles in water medium**
