

International Workshop 'Ultrafast Beams and Applications'
2-5 July 2019, Yerevan, Armenia

Joint Laboratory of Experimental Biology
CANDLE SRI and IMB NAS RA

In vitro, in vivo, and in silico modelling for radiobiological research

N. Babayan¹, K. Harutyunyan¹, E. Avagyan², M. Melkumyan², T. Nazaryan², A.
Hovakimyan¹, N. Grigoryan, N¹. Sarkisyan, R. Grigoryan¹

¹ Institute of Molecular Biology NAS of RA

² "CANDLE" Synchrotron Research Institute

Yerevan, 2024

Models for Radiobiological Research

In vitro

Isolated cells/tissues

2D/3D cancer models

In vivo

Rats/mice

In vivo glioblastoma
model

In silico

AI/ML

Drug-like properties
prediction

In Vitro Studies

Conventional 2D cancer models

Advanced 3D cancer models

Advantages

- Control and Precision
- Molecular mechanisms
- Extrapolation to Humans
- Ethical Considerations
- Cost and Time Efficiency

In Vitro Studies

AREAL: UPEB irradiation
Irradiation dose: 3 Gy
Repetition rate: 20 Hz

Cell line: F98 (human glioblastoma)
Staining: Calcein AM (Live)/DAPI (Dead)
Imaging: Confocal (Cytation 10)

Unstained spheroid

In Vitro Studies

AREAL UPEB irradiation
Irradiation dose: 3 Gy
Repetition rate: 20 Hz

Cell line: F98 (human glioblastoma)
Staining: DC-FDA
Imaging: Two-photon microscopy

Real-time imaging

Control

4 h post-irradiation

Control

2 h: post-irradiation

4 h: post-irradiation

In Vitro Studies

AREAL UPEB irradiation
Irradiation dose: 3 Gy
Repetition rate: 20 Hz

Ongoing/upcoming studies

DNA damage/repair analysis

Live vs. Apoptotic cells

Cell death/proliferation analysis

Co-culture studies

Co-culture with glial, endothelial cells, fibroblasts etc.

In vivo studies

Dr. Gohar Tsakanova
Former head of the lab of
Experimental Biology,
CANDLE SRI

The LD50 was estimated

- Dose: 2 Gy
- Pulse repetition rate: 2 Hz
- 50% of the animals survive 30 days post-irradiation

Advantages

- Complexity
- PK/PD
- Long-term Studies

Immune system response

- Alterations in the rat immune system: 3 days post-irradiation
- Total recovery: 28 days post-irradiation

DNA damage rate

In vivo studies

In collaboration with Dr. Aurelie Tchoghandjian
Head of GliOME project at the Institute of Neurophysiology, Aix-Marseille Université, France

Upcoming studies

Glioblastoma in vivo model

Two-Photon Intravital Microscopy of Glioblastoma

In silico studies

In Silico Pipeline for Predicting ADMET Properties

Absorption

- Aqueous solubility (logS)
- Lipophilicity (logP)
- Human intestinal permeability (CACO-2) permeability
- Human Intestinal Absorption (HIA)
- MDCK cell line permeability
- Human Oral Bioavailability
- P-glycoprotein inhibitor

Distribution

- Plasma protein binding
- Blood Brain Barrier permeability
- Pharmacokinetic volumes of distribution (Vd)
- Steady state volume distribution (VDss)

Metabolism

- CYP Substrates (CYP1A2, CYP2C9, CYP2C19, CYP2D6, CYP3A4)
- CYP Inhibitors (CYP1A2, CYP2C9, CYP2C19, CYP2D6, CYP3A4)
- Drug-drug interactions
- OATP1B1/OATP2B1/OATP1B3 inhibition
- Metabolism by human UGT enzymes (Phase II)

Excretion

- Human microsomal stability (CLint)
- Elimination half-life Human
- Elimination half-life Rat
- Human renal clearance (CLr)
- P-glycoprotein substrates and inhibitors

Toxicity

- Mutagenicity (Bacterial Reverse Mutation (AMES) test)
- Genotoxicity (in vitro micronucleus assay)
- Genotoxicity (in vivo micronucleus assay)
- Carcinogenicity (rodent)
- Cardiotoxicity (hERG inhibition)
- Hepatotoxicity (DILI)
- Neurotoxicity (AChE inhibition)
- Nephrotoxicity
- Acute oral toxicity (LD50, GHS)
- Developmental toxicity potential
- Endocrine toxicity (ER, TPO)

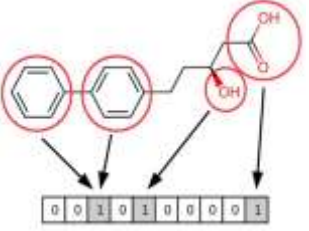

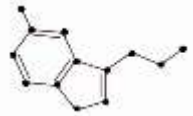

Advantages

- Speed and Efficiency
- Cost-Effectiveness
- Ethical Considerations
- Risk Reduction
- Integration of Diverse Data

RISK SCORE: estimated based on ADMET properties along with physicochemical and medicinal chemistry properties

In silico studies: Models / Predictions

AI/ML models

Name	Description	Example
Descriptors	Physicochemical properties	Molecular weight Topological polar surface area Number of hydrogen bond acceptors Number of hydrogen bond donors Number of sp hybridized carbon atoms Number of rotatable bonds etc.
Fingerprints	Encoded molecular fragments	
Graphs	Nodes as atoms and edges as bonds	
Large Language Models	Simplified molecular-input line-entry system	<chem>CC(=O)Oc1ccccc1C(O)=O</chem>

Ensemble of AI/ML models (combination of all models)

Final Predictions

Classification task

Mutagenicity: positive/negative
hERG inhibition: active/inactive
Nephrotoxicity: toxic/non-toxic

Regression task

Solubility: logS values
Renal clearance: mL/min/mg values
Plasma protein binding: PPB % values

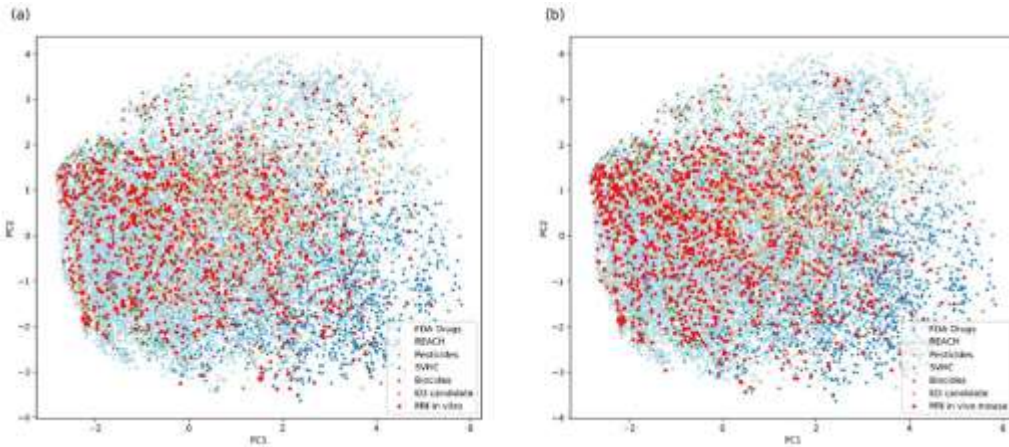

Our Paper

Datasets Construction and Development of QSAR Models for Predicting Micronucleus In Vitro and In Vivo Assay Outcomes

Lusine Khondkaryan, Ani Tevosyan, Hayk Navasardyan, Hrant Khachatrian, Gayane Chilingaryan, Gohar Tadevosyan, Lilit Apresyan, Nelly Babayan, Zaven Navoyan, Helga Stopper

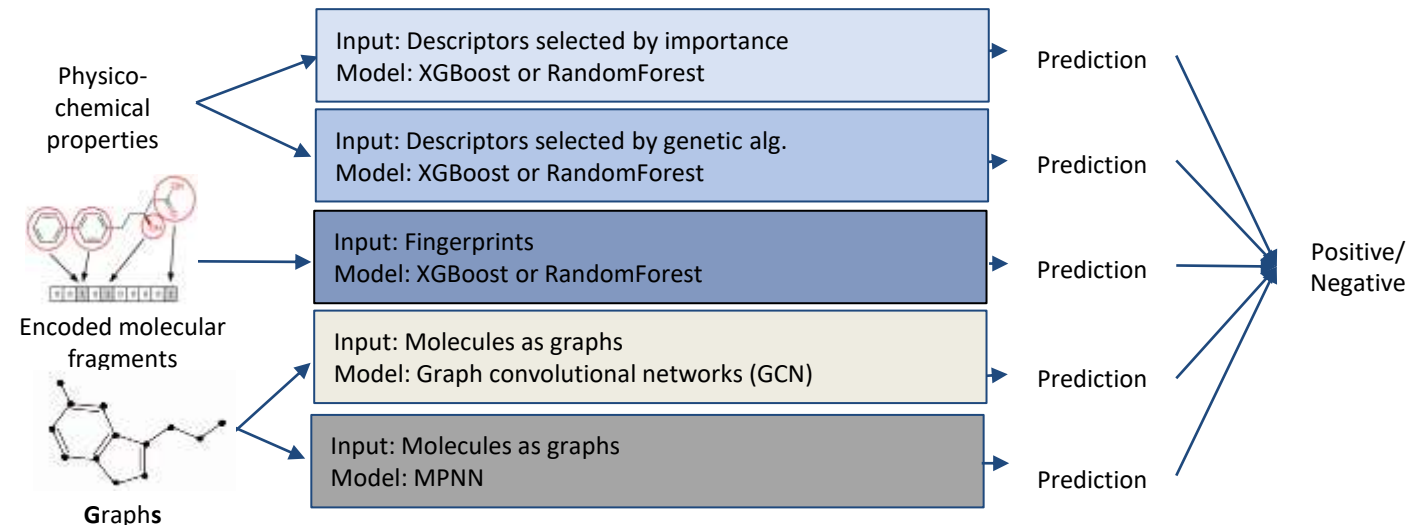

Toxics 2023, 11(9), 785; <https://doi.org/10.3390/toxics11090785>

2D PCA visualization of chemical space of compounds found in MN in vitro (a) and in vivo (b) datasets

Extracted from 35 million PubMed papers using BioBERT pretrained large language model

Developed ensemble model for toxicity prediction

In silico studies: Risk Score
